Link to the World Health Organization (WHO) website, where the latest updates on COVID-19 can be found: <https://www.who.int/countries/en/>

It is important to take certain things into account when analyzing data provided by the WHO:

- The WHO provides raw data on the number of cases and deaths in each country. However, we must take into account the country's Human Development Index (HDI) ranking, its population, and the number of hospital beds, respirators, and health workers per capita. These factors indicate the severity of the situation in each country.
